

Book now:

NX Basics Training

For Siemens NX beginners and those switching.
Trainer Simon shows you the most important tools and workflows
for a successful design.

The Bizlearn NX Basic Design Training is aimed at **CAD beginners** and users switching from another system alike.

The sooner you internalize the right workflows and methods, the better. We'll help you get the most out of Siemens NX right from the start. In this training you will learn sustainably and in a nutshell everything that is necessary to master the basics of assemblies, sketches, modeling and drafting.

To ensure that our training content is understood and put into practice, we are always active as user advisors and method developers even after the training.

The training content of the NX 1980 Update Training consists of individual videos and optional reading units, depending on the defined user role and NX version. The supervision of the training by an NX trainer ensures the training success with regard to the training topics shown online. The trainer can be seen as well as heard in the courses.

The Basic Design Bundle teaches the full potential of Siemens NX software at the entry level. Consolidate what you have learned in a final live webinar. The perfect introduction for designers and engineers.

The **Rapid Basics Bundle** succinctly covers everything beginners need to know.

Why Bizlearn?

Bizlearn is the high-flyer on the German and international market for up-to-date, didactically prepared software training. We advise companies and create first-class training concepts for their employees. Our specialty is blended learning solutions for users of Siemens Digital Industries software. Since our foundation, we have had the pleasure of supporting over 16,000 training participants around the globe.

For more than 5 years we have been exclusively producing online training courses for large OEM's as well as smaller medium-sized companies. We implement large, multilingual projects in just a few weeks. Thanks to our strategic planning, years of experience and Bizlearn's highly motivated and reliable staff, we are able to tailor our offerings to the exact budgets and employees of our clients.

Choose your training:

The **NX Basic Design Training Bundle** gives you the perfect introduction to the design world of Siemens NX. In addition to the entry-level courses **Rapid Basics I + II** we give you an understanding of the new intelligent **Sketch Solver**. You will also learn our **NX CAD Secrets** right from the start. They secure the basis for successful workflows for you. Because you should not only learn the names of the tools, but above all how to use them specifically for a wide variety of purposes.

(If necessary, it is also possible to do the training units Rapid Basics as well as NX New Sketch Solver to be booked separately)

Basic Design Bundle

- Modeling, Sketch, Assembly, Drafting, Method Training and Consolidation
- Includes NX Rapid Basics I + II
