# NX Continuous Update Training

**Learn about all relevant innovations for mechanical design from your previously used NX version to Siemens NX 2007.**

The Continuous Release model of Siemens NX also requires continuous training of NX users. Even if the CAD software becomes more user-friendly with each version, there are so many, unfortunately often unknown, potentials in Siemens NX. With our NX 2007 Update Training we want to show you the new functions and improvements. But most of all, in our NX Update Trainings we show you methodical concepts and practical workflows to fully exploit the potentials of Siemens NX.

To ensure that our training content is understood and put into practice, we always act as user supporters after the training, as well as method developers.

The training content of the NX 2007 Update Training consists of individual videos and optional reading units, depending on the defined user role and NX version. The supervision of the training by an NX trainer ensures the trainings success regarding the training topics shown online. The trainer can be seen as well as heard in the courses.

## Why Bizlearn?

Bizlearn is the high-flyer on the German and international market for up-to-date, didactically prepared software training. We advise companies and create first-class training concepts for their employees. Our specialty is blended learning solutions for users of Siemens Digital Industries software. Since our foundation, we have had the pleasure of supporting over 16,000 training participants around the globe.

For more than 5 years we have been exclusively producing online training courses for large OEM's as well as smaller medium-sized companies. We implement large, multilingual projects in just a few weeks. Thanks to our strategic planning, years of experience and Bizlearn's highly motivated and reliable staff, we are able to tailor our offerings to the exact budgets and employees of our clients.

high success rate

available in 7 languages

dynamic & role-based content

live support

easy 24/7 access

## Choose your training:

Staying up-to-date gets a lot easier with the Continuous Release model of Siemens NX. Our Bizlearn CAD Mach 3 Update Bundle will minimize the effort of integrating the software innovations into your daily workflow - without even leaving your workplace. The Update Training is recommended for experienced users that are already working with Siemens NX. For beginners we recommend our Rapid Basics Training. Choose the CAD Mach 3 Update Bundle and you get the full NX CAD Secrets Training free of charge! It is also possible to only book the NX New Sketch Solver Training.

### CAD Mach 3 Update Bundle

- New features for Freeform, Sheet Metal, Variant, WAVE, PMI und Rendering
- Includes NX New Sketch Solver Training
- Includes NX CAD Secrets Training free of charge
- 12 month access to our Bizlearn Online Campus
- Hours of video material, each including audio explanation
- Audio available in different languages (DE, EN, FR, CN and more on request)
- Customized training content (available on request)
- Customized CAD roles starting from 10 participants
- Live support for 30 days (before and after training) with trainer Simon
- Maintenance and moderation of the learning platform
- PDF handout and final evaluation of the training success
- Our Chinese server are always inclusive

### NX New Sketch Solver

- Master the New Sketch Solver
- 12 month access to our Bizlearn Online Campus
- Hours of video material, each including audio explanation
- Audio available in different languages (DE, EN, FR, CN and more on request)
- Customized training content (available on request)
- Live support for 30 days (before and after training) with trainer Simon
- Maintenance and moderation of the learning platform
- PDF handout and final evaluation of the training success
- Our Chinese server are always inclusive
